

## **What do you get if you cross a pig with a dinosaur?**

**Jurassic pork.**

The past few decades have generated a wealth of information about those fascinating creatures called **Dinosaurs**. We're going to run through about 130 million years of evolution with the dinosaurs in less than an hour at 2:00 p.m., Sunday, June 8, 2014, at Nancy Sand's.

### **The Top Ten List**

- What makes a dinosaur a dinosaur?
- Just how big were they?
- Were they warm blooded like us?
- Were they good parents?
- Was Velociraptor as bad as portrayed in *Jurassic Park*?
- Were they scaly or feathery?
- What killed the dinosaurs?
- Are dinosaurs really extinct?
- Who benefited from their extinction?
- Can we really recreate dinosaurs?

Nancy Sand is arranging a tour of the Science Museum of Minnesota (SMM) beginning at 12:50 p.m. on Friday, June 20, 2014. We'll look at the SMM Jurassic Park first, and then see the visually stunning movie "Dinosaurs Alive!" followed by a tour of the special exhibit "Ultimate Dinosaurs!"

When you go to the "Ultimate Dinosaur" special exhibit, you are going to see dinosaurs you have never seen or heard of before. How come, you ask? Where were they found? Hint: Most of the dinosaurs you know about were discovered in North America

Well, actually, Gary will be showing artist's concepts of what the dinosaurs looked like so you'll have some idea about their appearance. Then, hopefully, if you didn't have nightmares about dinosaurs before, you will now!

Contact Nancy Sand or Gary Gray ([gdgray@q.com](mailto:gdgray@q.com)) for more information.

## **What do you get when dinosaurs crash?**

**Tyrannosaurus wrecks.**
